PROFESSIONAL PROFILE

Knowledge Management and Customer Experience (CX) Operations specialist with 4+ years of experience turning complex information into reliable self-service content and clear, practical guidance for frontline teams. Uses human-governed AI to research and structure content, test workflows, and challenge weak outputs. Policy decisions and final approval stay with people. Delivered bilingual Help Centre and Salesforce Knowledge revamps, bot journey improvements, and a major training material revamp. Led launch readiness for approximately 500 agents and 20-30 trainers across the UAE, Jordan, and Egypt.

PROFESSIONAL EXPERIENCE

- **Sharjah Book Authority**
Assistant Officer (Contract) | Jul 2026 – Present
- **MBC Shahid** | Dubai, UAE | Jan 2022 – Mar 2026
- **Knowledge Management and Customer Experience Specialist** | Apr 2022 – Mar 2026
- **Customer Researcher** (Concurrent Assignment) | May 2025 – Sep 2025
- **Escalation Specialist** | Jan 2022 – Apr 2022
 - Owned knowledge delivery for approximately 500 support agents across three markets. Turned product and operational information into Salesforce Knowledge articles, Care Update emails, Slack updates, meetings, and workshops, then confirmed that teams understood the changes.
 - Reviewed customer support interactions across WhatsApp, live web chat, calls, and email to identify recurring problems and opportunities to improve the customer experience.
 - Conducted one-on-one customer interviews, documented recurring themes and pain points, and shared the findings to support product and customer experience improvements.
 - Earned three MBC Shahid recognition awards: Ace of Initiatives for positive attitude and impact, Quality Wizard for an outstanding Q1 QA score, and Valuable Gem for innovation, collaboration, and dedication.

- OpenAI Codex
- Claude Code
- AI image generation and editing
- Markdown
- Claude terminal workflows
- Connectors
- Miro
- Canva Presentation Design Expert

Working familiarity

- PowerShell
- GitHub
- GitHub Pages

SELECTED PROJECTS

Salesforce Knowledge Base and Help Centre revamp

Led the Salesforce Knowledge Base and Help Centre revamp using large language models (LLMs) and Salesforce Einstein tools. Reviewed every AI-assisted draft against policy and source documentation before approval. Delivered 360+ English and Arabic articles for customers and support agents within a 30-day deadline, saving an estimated 150 hours. After launch, agent knowledge emails dropped from almost daily to about one per month. Knowledge-related DSAT disputes fell from monthly to zero or one per quarter.

WhatsApp bot journey revamp

Owned the AI-assisted redesign, testing, configuration, and launch of five major English and Arabic WhatsApp support journeys. Used general-purpose LLMs, Salesforce Einstein Bots, and Miro to map customer intents, build decision paths, draft responses, identify edge cases, and prepare test scenarios. Reviewed every AI output and kept Arabic content under human review. After launch, customer contacts fell 15–20%, repeated questions fell 10%, and self-service CSAT rose from 15% to 25%.

New Signup Flow launch readiness

Led CX testing and launch readiness for signup, sign-in, password reset, and device-connection journeys across mobile, web, and TV. Used LLMs to build test scenarios, identify edge cases, analyze pain points, draft issue reports, and locate Knowledge Base articles that needed updates. Personally checked every AI output against manual testing. Created bilingual Knowledge Base content and Care Update communications, updated supporting visuals, and designed a 50-slide English Canva training deck. After launch, product controls prevented duplicate accounts, while password-reset and wrong-username case tags became rare.

Training material revamp

Led the English training material revamp and owned the technical content workstream. Reworked content that was outdated, repetitive, overly technical, and visually weak. Used LLMs, Canva, and PowerPoint to audit the material, rebuild its structure, simplify technical information, and prepare onboarding content, trainer guides, assessments, exercises, and quick-reference resources. Checked AI-generated content word by word and coordinated reviews with internal and vendor QA teams. Delivered three workshops to 20–30 trainers, who then rolled the material out across every vendor and operational location.

Scope-Safe Service Ops and AI Knowledge Base Validation | Independent Project Owner

Developed Scope-Safe as an independent service concept for controlling customer-facing operational answers without handing policy decisions to AI. Used BMAD, Codex, ChatGPT, Claude, and terminal workflows to research 30 Dubai home-maintenance and AC SMEs. Produced 10 Knowledge-Leak Snapshots from public sources and built a customer-discovery kit, a controlled outreach system, and a validation dashboard. Business owners kept authority over policy and final approval throughout.

EARLIER UAE EXPERIENCE | 2016 – 2022

Earlier customer service and operations work across the UAE covered event management, event coordination, and patient coordination. Managed conferences and government events, coordinated vendors and logistics, handled high-volume scheduling, and supported COVID-19 drive-through testing operations.
